

Johnson Pump
Liquid Guide

Liquid Guide

In this liquid guide we have collected the total knowledge that is established within Johnson Pump, as well as the knowledge brought to us from our suppliers, manufacturers of different materials and liquids and other reliable sources.

The liquid guide gives you information about the chemical resistance of different materials towards mentioned liquid as well as information about composition, density, viscosity and vapour pressure of the liquid.

New experiences are constantly added and it is therefore impossible to issue a completely correct liquid guide. Certain inconsistency can occur depending on the information source and in which way the liquid has been tested.

The liquid guide will therefore be used as a **guide** and **recommendation** – not as a guarantee.

If hesitation, or when information is missing for the different temperatures, concentrations etc. we recommend you to contact Johnson Pump.

Key to the codes

A = Excellent – Recommended

B = Good – Can be used

C = Doubtful, can be used in some cases – Should be avoided

D = Cannot be used

NB.

SIS 2333 = AISI 304

SIS 2343 = AISI 316
